

Palladium
TECHNOLOGIES, INC.
Ahead of the Curve!

With SIMON monitoring, control and alarm system as the core, customizable screens are created by the user utilizing a combination of Palladium's unique, award winning software and Apple's elegant hardware.

Visual Alarms in SIMON appear on the iPhone and/or the iPod Touche providing instant notifications through the WiFi network. An audible bell will also sound in both the iPhone and the 2nd generation iPod Touch, along with a vibration alert on the iPhone.

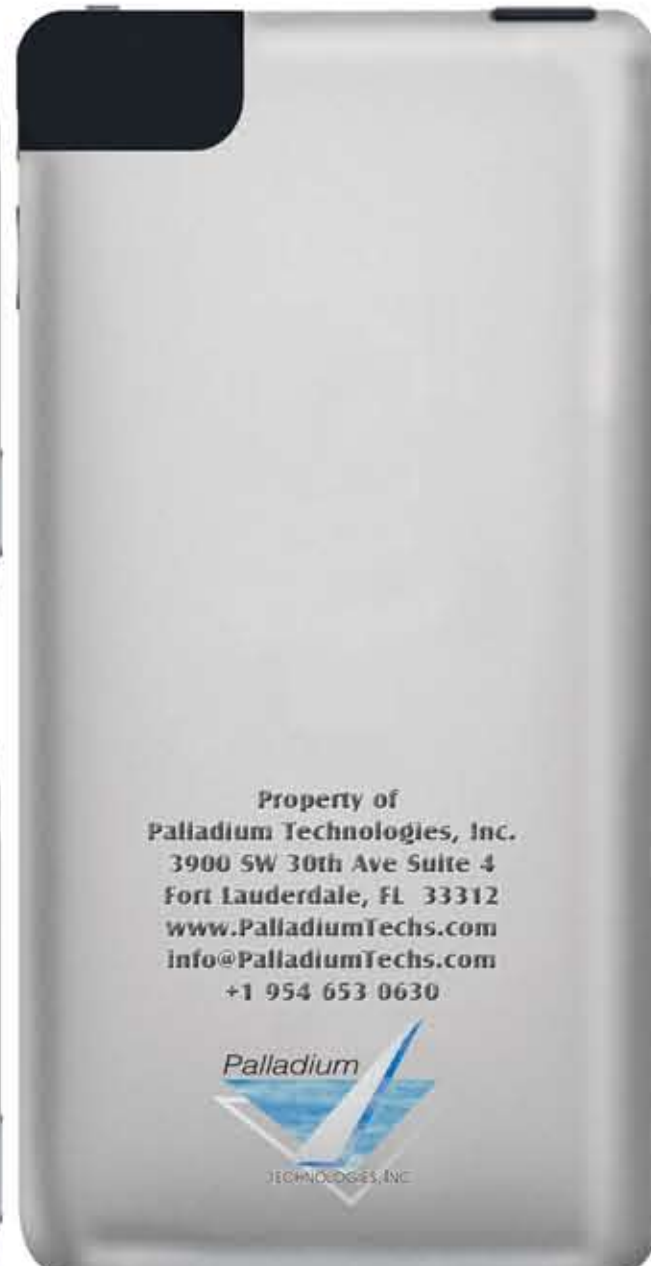

Control functionality has also been added to SIMON where by pressing a button on the touch screen SIMON will allow the remote control over pumps, lights, doors, etc.

SIMON works wirelessly around the yacht and dock to provide the captatin and crew direct remote viewing of: Engines, Generators, Tanks, Bilge Levels, Batteries, Ships AC Bus, and more.

The iPod Touch and iPhone feature a multitouch graphic user interface with the unique ability to reorient and resize the display from portrait to landscape as the handset is rotated along with finger tip scrolling ability. Visit the "app" store at <http://itunes.com/app/isimon> to download the SIMON demo. Click the icon.
